

NO WIND TURBINES LINCOLN COUNTY

Landowners in Lincoln County are being approached to lease their properties for wind turbines. At this time, we can take action against wind turbine developments by speaking out at the upcoming Lincoln County Board of Commissioners Meetings and joining the group [@NoWindTurbinesLincolnCounty](#) on Facebook for more information.

Wind turbines would be devastating for LINCOLN COUNTY:

- Broken rotor fragments can severely injure people, livestock, and property.
- Lincoln County ice storms: Ice thrown from blades can be deadly.
- Potential for PFAS, Fiberglass, and BPA debris causing land and water contamination.
- Disturbance to low-flying planes used for agricultural and recreational purposes. Potential dead zones for the National Weather Service prevent storm tracking and alerts.
- Shadow flicker.
- Water contamination risks from documented pockets of Uranium and Arsenic spreading through the aquifer due to construction and vibration from operation of wind turbines (the Garber-Wellington aquifer supplies water for 400,000 people.)
- Dramatically decreased property values for non-participating landowners.
- Severe health issues due to wind turbines have been reported worldwide, thus making it irresponsible and reckless to place them near any residence.
- Destroys our beautiful Oklahoma landscape while tearing apart communities, pitting neighbor against neighbor.
- Financial liability and gag orders are often imposed on individuals who sign these leases.
- Maims and kills thousands of hawks, geese, owls, bats and other flying wildlife
